

FIREBASE DEBUGVIEW

WHAT IS THAT?

DebugView is a tool provide by Firebase to see the raw event data logged by your app on development devices in near real-time.

HOW TO USE ON ANDROID?

- Enable the Analytics Debug mode on an Android Device:

```
adb shell setprop debug.firebase.analytics.app package_name
```

- Command to Disable the Analytics Debug mode:

```
adb shell setprop debug.firebase.analytics.app .none.
```
